SUMMARY

AWS Cloud Engineer with 3 years of experience specializing in infrastructure provisioning, application development, and continuous integration automation. Developed serverless architectures on AWS, managed infrastructure provisioning using Terraform and GitLab CI, and built Spring Boot microservices on Red Hat OpenShift. Optimized application performance by 20% through microservice decoupling, reduced code duplication by 40% by developing shared libraries, and streamlined deployment pipelines to accelerate continuous delivery.

SKILLS

AWS: Lambda, API Gateway, EC2, ECS, EKS, VPC, S3, SQS, SNS, Route 53, IAM, OpenShift (ROSA)
DevOps: Docker, Kubernetes, Terraform, Scalr, GitLab CI/CD, Argo CD
Monitoring & Observability: Splunk, Dynatrace, CloudWatch, CloudTrail
Programming Languages: Java, Node.js, TypeScript, Bash/Shell, Linux
Agentic AI: Claude, Open Code, Codex

EXPERIENCE

Capgemini Technology Services

07/2026 – Present Pune, Maharashtra	Associate Consultant - Developing Claude Skills integrated with Model Context Protocol (MCP) tools to automate engineering workflows, reducing manual effort. - Building proof-of-concept implementations to validate skill's output structure and enforce guardrails before wider adoption. - Applying AI-driven automation to an active Spring Boot 4 migration, standardizing the upgrade across microservices.
07/2025 – 06/2026 Pune, Maharashtra	Senior Software Engineer - Managed cloud infrastructure provisioning using Terraform and Scalr, automating environment deployments with GitLab CI/CD pipelines to drive operational efficiency. - Optimized Lambda cold-start performance by bundling and minifying Node.js code with Webpack, reducing deployment package size and improving execution latency by 30%. - Engineered reusable GitLab CI Components to standardize enterprise pipelines, accelerating deployments. - Monitored system health and debugged production issues by analyzing logs, metrics, and traces using CloudWatch, Splunk, CloudTrail, and Dynatrace. - Developed secure, high-volume Spring Boot APIs and decoupled microservices using AWS SQS and Aurora PostgreSQL, boosting performance by 20%. - Created internal TypeScript and Spring Boot libraries to centralize common code, reducing duplication by 40% across multiple projects.
10/2023 – 06/2025 Pune, Maharashtra	Software Engineer - Collaborated with leading U.S. insurance client to transform legacy applications to modern, scalable architectures. - Executed cloud migration, moving legacy core applications from Pivotal Cloud Foundry (PCF) to Red Hat OpenShift on AWS (ROSA). - Participated in cross-functional Agile team, facilitating sprint planning, backlog refinement, and continuous delivery. - Deployed enterprise microservices on ROSA (Red Hat OpenShift on AWS) using Kubernetes manifests and automated continuous delivery using Argo CD. - Developed serverless applications using AWS Lambda (Node.js) integrated with API Gateway and Redis Cache to support highly efficient, event-driven workflows.

CERTIFICATES

- AWS Certified Cloud Practitioner
- AWS Certified Solutions Architect Associate
- Claude Certified Architect Foundations

EDUCATION

09/2018 – 07/2022	Bachelor of Engineering , <i>Anna University</i>
Chennai, Tamilnadu	CGPA - 8.5
